

# Assignment\_1

Thrusanth Ravichandran

## Due 14 Sep 2017, 11:59pm

- \* **Fork** this repository to your GitHub and **Clone** to your computer.
- \* Create a folder in your personal CofC webspace called portfolio.
- \* Inside of portfolio, create an **index.html** landing page which has a **responsive design** using the `<header>`, `<nav>`, `<section>`, `<footer>` special HTML5 divs.
  - \* The index.html is a landing page for your portfolio of CofC work.
  - \* The `<header>` area should have your name (you can omit last name if you like), degree, expected graduation date, professional/career goals/interests. A professional headshot type picture should be to the left of this text, and when the screen resolution is phone-size, the text should go below neatly.
  - \* The `<nav>` div should have links to the HOME page (index.html) and at least 3 courses you want to showcase in your portfolio.
    - \* One of these must be CSCI 215 Website Programming
    - \* Write out the entire name of the course along with prefix and course number.
  - \* The `<section>` tag on index.html should just have some text about the CSCI program you are in at CofC, your experiences, etc.
  - \* The `<footer>` should have links to the CSCI and the CofC homepages. Put your email address here in the following sneaky format: kbriggsATcofcdOTedu
- \* Each one of your divs must have at least 3 CSS styles attributes assignments associate with them. All styles should be located in mainstyle.css.
  - \* You are not allowed to use any packaged templates although you can get color combinations ideas from <http://www.colorcombos.com/> or sites similar to <https://designschool.canva.com/blog/website-color-schemes/>. You must come up with all the styles yourself. **You are not allow to use any type of WYSIWYG software in this assignment.** All html/CSS must be written from scratch in Webstorm or similar editor.
- \* For each one of the courses in your portfolio create a sub folder named csci215, etc. Inside of each of these folder should be an html file identical to the parent index.html, but the section should include the course's course description, a link to a pdf of the syllabus for the course, and anything else you want to say about the course.
  - \* In your csci215 folder's index.html, go ahead and include an Assignment 1 link to the pdf of this assignment.
  - \* For the other courses, you need to have at least 3 links to assignments that you have completed. These should include source code if applicable. If you want to include a course in which you are current enrolled, then just put placeholder inactive links for these assignments for now and upload them as the semester goes along.
- \* Make sure you **commit** and **push** your code to Git and GitHub

often.
